

ABSTRACT OF THE DISCLOSURE

The multi-light source multi section optic fiber Christmas tree mainly comprises a base plate, a color control panel, a plurality of lighting elements and a plurality of control lines, in which the base plate receives the color control panel
5 consisting of power cable and control lines. The electronic control circuit will regulate the color change of lighting elements, supply power to the lighting elements in the section optic fiber. The lighting element of each section optic fiber will connect several section optic fibers to ensure that each section optic fiber will receive sufficient light, evenly spread over the length of section. The lighting
10 elements are high colorful LED electronically controlled to gain the high safety and low operation temperature.
